<https://github.com/Reply2Zain/CIT-130/tree/master/PersonalityProgramF>

My program takes in any of the 16 Myers-Briggs Personality Types and provides useful information into each of the four preferences that the user inputted. There is background information that is available upon the request of the user for more information into the dimension of the personality type that they might not be aware of. The program then provides study tips that are tailored for each of their personality types and also says if a specific indicator is important when it comes to study effectiveness.

```
Please type your four MBTI personality type letters:
intj

Personality Type Entered: INTJ

Extraversion (E) vs Introversion (I):
Would you like to receive background information on this? > yes
The first of the four preferences is Introversion vs Extraversion. Extroverts get their energy from the outside environment including people and places. They feel better and are more productive when in social settings and often look forward to going out. Introverts on the other hand get their energy from within themselves and are more productive when in by themselves. Social settings drain the energy of an introvert and does not come off as a productive environment for them. Extroverted people are accessible and seem to process things faster due to their "act first think later" attitude. Introverted people on the other hand tend to have a more reserved attitude and can easily end up thinking deeply about a given before acting.

You are an introvert
-Study Tips from this type are effective-
Study Tip: Having a preference of introversion over extraversion means that you work better in a personal, more individual setting. You like to plan things out, which is a good trait to have. Mind maps can help connect your thoughts. If you do end up studying with others, try to not pick a group of friends who are too outgoing or productivity would diminish

Intuition (N) vs Sensing (S) :
Would you like to receive background information on this? > no

You are Intuitive:
Study Tip: Being intuitive means that you like to know the why. Looking for patterns and relationships often help and go a long way. Use your energy wisely and take breaks

Future Ideas:

Some future ideas that I would like to add to my program includes allowing for user input on how valuable they found the feedback to put into a text file. I could also allow the user to see if they want to try inputting a new personality type at the end without having to start the program up all over again. These are two ideas that I would have incorporated if time was not an issue.

I could make the text easier to read and follow which would make the output more clear. I could also make a few more changes to make the code more modular and easier to add to. Cool extensions include a student success decision tree which could incorporate personality type to help students.
